PROFILE SUMMARY

A passion for designing, organizing and managing the efforts that goes into a project from start to finish - in that context, I am a project management professional (PMP), an accomplished technology writer, self-taught UX/UI designer, infinitely curious photographer and a traveler. My project management experience include working with geographically distributed teams, communications management, managing virtual teams and interacting with cross-functional stakeholders. Over the years, I have acquired quite a bit of transferable skills working on various aspects of information architecture such as content development, content quality assurance, user experience and accessibility.

CISCO SYSTEMS [Learning@Cisco]

Learning@Cisco, the Cisco learning division drives technical competency by creating best-in-class career certification course and assessment products for use by Cisco's customers, partners, and employees. L@C's primary audience is the hundreds of thousands of individuals worldwide who enroll in Cisco certification courses. This audience is engaged in a learning process that leads to certification at various levels of computer networking proficiency and specialization.

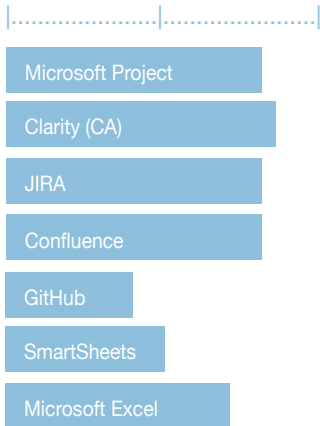

Role Summary

Project manage content conversion and localization efforts including establishing and tracking timelines, enterprise support readiness, UAT and beta testing, team meetings and maintaining internal project status communications. Manage and review of curriculum and course designs to validate learning objectives, structure, and content approach. This includes establishing and tracking project plan, cross functional coordination of SMEs, developers, vendors and other geographically distributed shared resources across time zones.

Responsibilities

- Collaborate with business stakeholders, process owners and development team to understand business objectives, requirements, constraints and timelines
- Manage the production of learning products (documentation and graphics) for print, web and ePub using Xyleme Learning Content Management System (LCMS), an XML authoring tool
- Ensure the health of the xyleme knowledge base by monitoring changes in templates, search capabilities, and lifecycle management
- Participate as part of a cross-functional team to transition content development into a knowledge management practice based on the use of intelligent content tools, practices, and methods
- Review deliverables produced during user research, usability testing, and provide critical feedback
- Conduct regular reviews to ensure project is on track, communicate with the relevant stakeholders on a timely basis
- Drive quality efforts to ensure that all final formatting and graphic output meets customer distribution requirements.
- Review curriculum and course designs to validate that the learning objectives, content sequencing, and the overall content approach are instructionally sound
- Consult content developers, project managers, and other team members as needed with instructional design through an SLA
- Work closely with extended team of developers, instructional designers and the Quality Assurance Services team to support meaningful and relevant visual learner experiences within the framework of the client's brand identity.
- Contribute to Xyleme integration and publishing strategy by testing content import and publication customizations, documenting and testing outputs
- Support legacy content conversion efforts by training vendor resources and reviewing the converted courses.
- Participate in quality improvement programs aimed at improving operational efficiency and customer satisfaction. Document best practices, optimize current practices
- Participate in UAT, UX improvement initiatives, ePub reader (QLM), Mobile content testing etc
- Use intelligent content to reduce time to market and costs of developing learning products
- Work with cross-functional teams and vendors to define appropriate actions to ensure brand & legal compliance is followed without exception.

- Served as a lead for a group of three writers
- Coordinate with quality management team for implementing CMM Level-5 processes,
- Evaluate and evangelize relevant open source tools
- Responsible for execution/publication of intranet content using internal CMS systems

“

I worked with UK on a number of projects at Cisco in both documentation and project management. He is an enthusiastic team member who is always willing to lend a hand to a project. Though we worked on opposite sides of the globe, he frequently made himself available on US time to host meetings, drive UAT testing, and fill in wherever and whenever we needed his help.

Sandra McCann,
Content Architect, Cisco Systems.

I had the pleasure of working with Unnikrishnan (UK) for almost 2 years. UK was our point of contact at Cisco regarding converted courses (initial training, production process, and delivery). He was always on top of things and made himself available whenever we needed his help. UK always made sure all deliveries are accounted for and are in top shape. I'm sure UK will succeed in any future tasks he will face.

Naveh Greenberg, Director, Defense Development at DCL, United States.

During the year that I lived in Bangalore and helped manage the ACS India Development Center (2005-2006), I had the pleasure to work with Unnikrishnan (UK). UK was one of those guys who gets into everything and drives it to closure. He was instrumental in revamping the corporate intranet, wrote articles for and edited our internal newsletter. He helped us drive several deliverables that ultimately facilitated a CMMi Level 5 appraisal. Leading a team of three writers, he provided documentation and graphics support to many diverse software development projects. His work was excellent, his attitude superb..

R. Scott Nebeker, Transition Director Infosys (North America).

Unnikrishnan proved to be a solid, dependable writer on the documentation team for Cisco Data Center Network Manager, a complicated application requiring solid knowledge of data center Ethernet networking. As the doc team lead, I could rely on Unnikrishnan to produce accurate, complete, well written content on-time, every time. While we worked on opposite sides of the globe from each other, Unnikrishnan showed professionalism in every communication in timely email responses and flexibility for scheduling the occasional team teleconference.

Mark Wilgus, Senior Program Manager, Cisco Systems

”

2002-2004 Technical Writer

MICROSOFT

Microsoft had outsourced a part of KB development to Vergil in the early 2000. Vergil had offices in Chennai and the United States.. American Cyber Systems has taken over Vergil Technologies in 2005.

Role Summary
